CERAMDIS
ADVANCED CERAMICS

Ceramic assemblies – our specialty

An increasing number of applications requires the positive properties of different materials.

With our long-time experience in ceramic assemblies and detailed product knowledge we have been able to develop a variety of reliable assembly techniques for different customer proven and tested combinations.

We assemble different materials by gluing, shrinking, brazing or embedding.

In collaboration we develop the optimum solution for your specific application.

Thanks to hybrid techniques, components can be optimally integrated and held.

We assemble ceramics-metal, ceramics-plastics, ceramics-ceramics-, and graphite-metal.

We offer complete solutions including the design for assembly tolerance clearance. Upon request, we also assemble our ceramics with parts provided by our customer.
