

Regardless of the component geometry, from prototypes to series, – production and machining of ceramic parts exactly according to your drawings.

Custom-made components

CERAMDIS
ADVANCED CERAMICS

Precision components – ceramics exactly according to your specifications

Regardless of the component geometry, from prototypes to series, we can develop and offer the most cost-effective solution. Our variety of ceramic materials and forming technologies are at our disposal.

Dry pressing

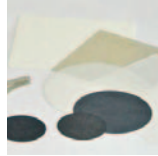

Isostatic
pressing

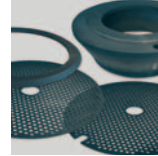

Extrusion

Injection
moulding (CIM)

Tape casting

Slip casting

We are the experts on the unbeatable properties of ceramic materials and their potentials. That's why we recognize your advantage in using them and implement this advantage in close collaboration with you.

With our product range we contribute to the economic success of your targeted leap in innovation.
