

# WB/PB 15 Series Eddy-Current and Powder Dynamometers

## FEATURES

- 7 Models with Maximum Torque from 140 N·m to 1200 N·m (103 lb·ft to 885 lb·ft)
- Braking Power: 12 kW to 140 kW
- Stable Braking Torque, without Shock
- Low Moment of Inertia
- Low Residual Torque
- Operation in Either Rotational Direction
- Braking Torque Measurement Included
- High Rotational Speed
- Rated Torque Available From Zero Speed (Powder Dynamometers)
- Integrated Optical Speed Sensor

## DESCRIPTION

Eddy-Current Brake Dynamometers (WB series) are ideal for applications requiring high speeds and also when operating in the middle to high power range. Eddy-Current Brakes provide increasing torque as the speed increases, reaching peak torque at rated speed. The dynamometers have low inertia as a result of small rotor diameter. Brake cooling is provided by a water circulation system, which passes inside the stator to dissipate heat generated by the braking power. The water cooling in the WB provides high continuous power ratings (max. 140 kW).

Powder Brake Dynamometers (PB series) are ideal for applications operating in the low to middle speed range or when operating in the middle to high torque range. Powder Brakes provide full torque at zero speed and are water-cooled, allowing for power ratings up to 48 kW. Both WB and PB Dynamometers have accuracy ratings of  $\pm 0.3\%$  to  $\pm 0.5\%$  full scale, depending on size and system configuration.

Magtrol offers three types of dynamometer brakes to absorb load: Hysteresis, Eddy-Current and Magnetic Powder. Each type of Dynamometer has advantages and limitations and choosing the correct one will depend largely on the type of testing to be performed. With over 50 models to choose from, Magtrol Sales professionals are readily available to assist in selecting the proper Dynamometer to meet your testing needs.

## MOTOR TESTING SYSTEMS

Magtrol's M-TEST 5.0 Software is a state-of-the-art motor testing program for Windows®-based data acquisition. Used with a Magtrol DSP6001 Programmable Dynamometer Controller, Magtrol M-TEST 5.0 Software provides the control of any Magtrol Eddy-Current or Powder Brake Dynamometer and runs test sequences in a manner best suited to the overall accuracy and efficiency of the Magtrol Motor Test System. The data that is generated by Magtrol's Motor Testing Software can be stored, displayed and printed in tabular or graphic formats, and can be easily imported into a spreadsheet.

Written in LabVIEW™, M-TEST 5.0 has the flexibility to test a majority of motor types in a variety of ways. Because of LabVIEW's versatility, obtaining data from other sources (e.g. thermocouples), controlling motor power and providing audio/visual indicators is relatively easy.

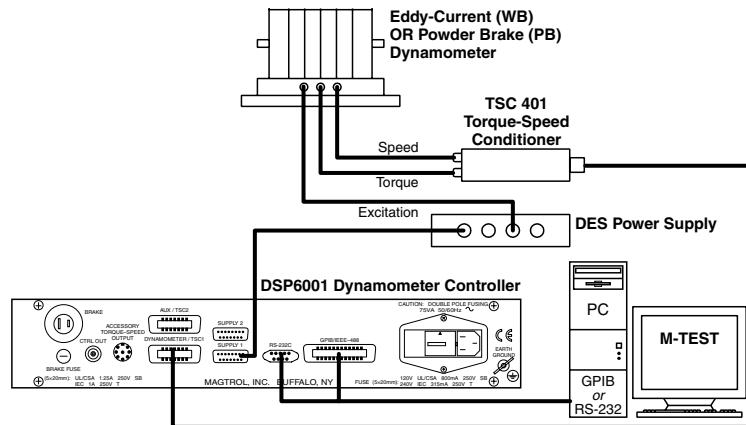

Magtrol's M-TEST 5.0 Software is ideal for simulating loads, cycling the unit under test and motor ramping. Because it is easy to gather data and duplicate tests, the software is ideal for use in engineering labs. Tests can be programmed to run on their own and saved for future use allowing for valuable time savings in production testing and incoming/outgoing inspection.

## APPLICATIONS

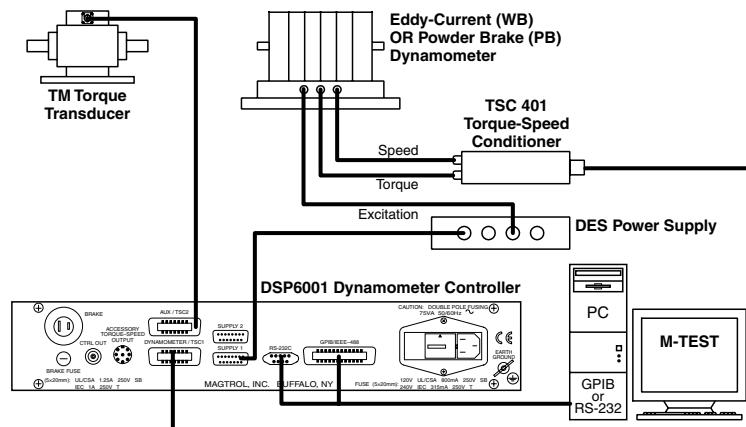

Mounted on test benches, WB/PB 15 Series Dynamometers allow performance and reliability testing on driving elements such as electric motors, combustion engines, servomotors, geared motors, reduction gears, pneumatic equipment, hydraulic transmission systems, starter motors, electromagnetic clutches, gas turbines and turbocompressors.

## SINGLE DYNAMOMETER CONFIGURATIONS

The Dynamometers can be complemented by various electronic modules such as the DES 311 Power Supply, TSC 401 Torque/Speed Conditioner and DSP6001 High Speed Programmable Dynamometer Controller.

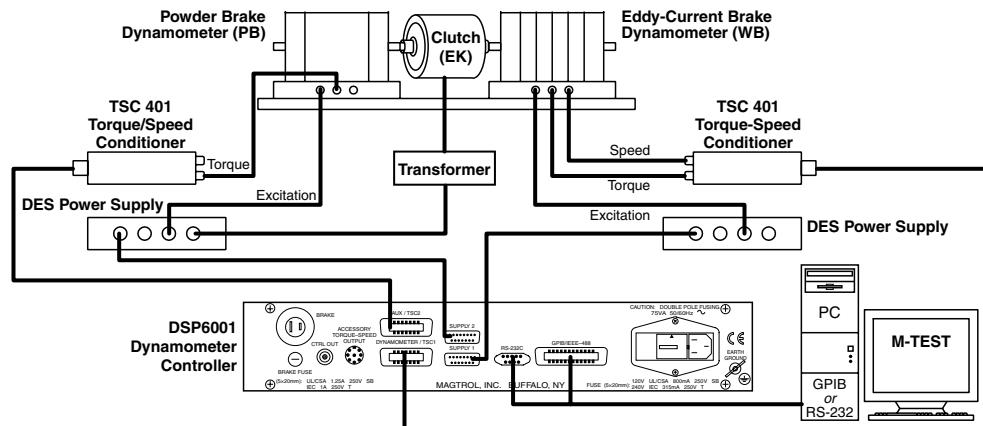

Magtrol also offers In-Line Torque Transducers, which employ a unique non-contact differential transformer torque measuring technology providing extremely accurate torque and speed measurement with superior electrical noise immunity. For a dynamic, high-precision system, the torque transducer can be mounted in line between the unit under test and the dynamometer.

## TANDEM CONFIGURATION

Magtrol offers Eddy-Current and Powder Dynamometers mounted in tandem. In tandem, the unique features of each type of dynamometer brake are utilized, allowing the unit under test to be applied with nominal braking torque from zero speed to maximum rotation. The Tandem Dynamometers are available on a number of WB/PB combinations.

## EDDY-CURRENT DYNAMOMETER OPERATING PRINCIPLES

The WB Eddy-Current Dynamometers develop their full power at high rotation speeds. The 15 Series is particularly intended

for motors which rotate at high speeds, up to 7500 rpm. The braking torque depends on the rotation speed.

## WB DYNAMOMETER RATINGS

Model	Rated Torque		Drag Torque De-energized		Nominal Input Inertia		Rated Power	Rated Speed	Max. Speed	Excitation Current*
	N·m	lb·ft	N·m	lb·in	kg·m <sup>2</sup>	lb·ft·s <sup>2</sup>				
<b>1 WB 15</b>	140	103	1.4	12.3	$5.00 \times 10^{-2}$	$3.68 \times 10^{-2}$	35	2390	7500	4
<b>2 WB 15</b>	280	206	2.8	24.7	$1.00 \times 10^{-1}$	$7.37 \times 10^{-2}$	70	2390	7500	7.5
<b>3 WB 15</b>	420	309	4.2	37.1	$1.50 \times 10^{-1}$	$1.10 \times 10^{-1}$	105	2390	7500	10
<b>4 WB 15</b>	560	413	5.6	49.5	$2.00 \times 10^{-1}$	$1.47 \times 10^{-1}$	140	2390	7500	12

\* Voltage at 20 °C is 45 volts.

### Optical Speed Sensor

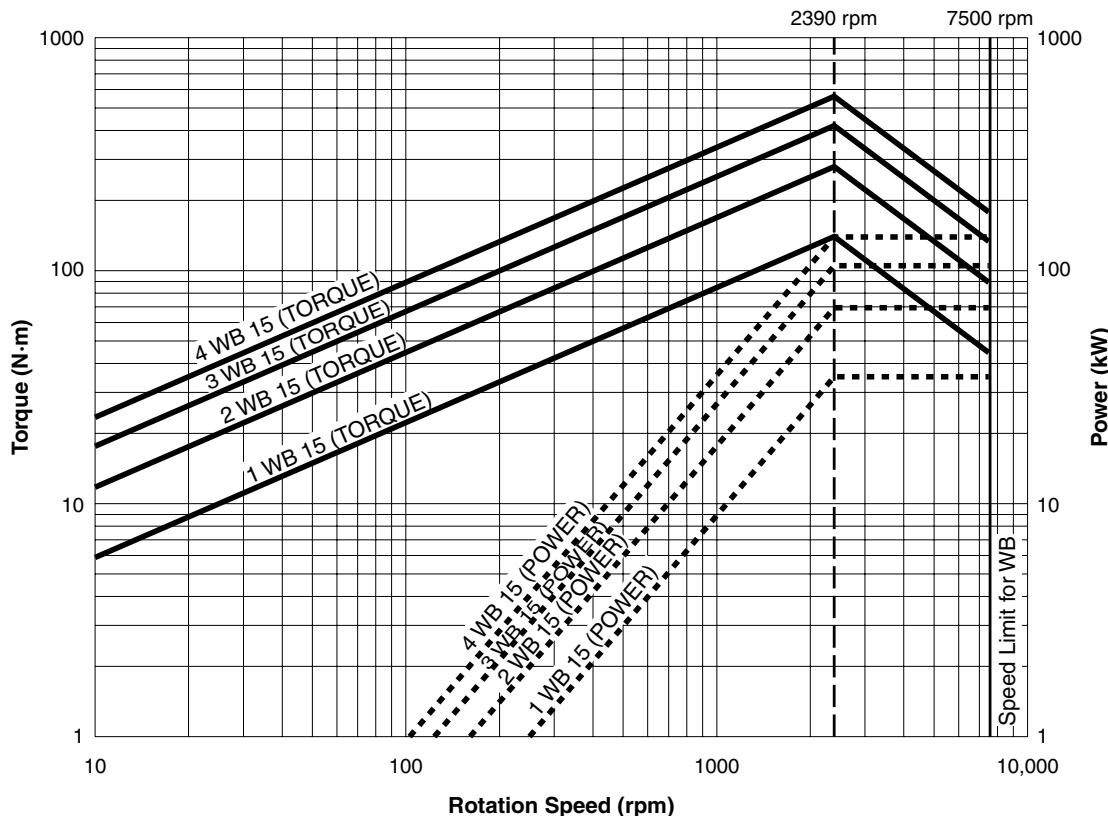

Each 15 Series WB Dynamometer has an optical speed sensor with a 60-bit pulse wheel delivered as standard.

### Cooling Water Consumption

For all WB models:  $\approx 30 \text{ l/kWh}$  at  $\Delta t = 30^\circ\text{C}$  (Metric)  
 $\approx 8 \text{ gal/kWh}$  at  $\Delta t = 86^\circ\text{F}$  (US)

## WB TORQUE-SPEED-POWER CURVES

The diagram below shows the characteristic curves for the 15 Series Eddy-Current Dynamometers.

## POWDER DYNAMOMETER OPERATING PRINCIPLES

The PB Powder Dynamometers contain, as their name suggests, a magnetic powder. The electrical current passing through the coil generates a magnetic field, which changes the property of the powder, thus producing a smooth braking

torque through friction between rotor and stator. The Powder Dynamometers (PB) produce their rated torque at zero speed. The element to be tested can be loaded at standstill to determine the starting torque.

## PB DYNAMOMETER RATINGS

Model	Rated Torque		Drag Torque De-energized		Nominal Input Inertia		Rated Power	Rated Speed	Max. Speed	Excitation Current*
	N·m	lb·ft	N·m	lb·in	kg·m <sup>2</sup>	lb·ft·s <sup>2</sup>				
<b>1 PB 15</b>	300	221	6	53	$5.40 \times 10^{-2}$	$3.98 \times 10^{-2}$	12	382	2000	4
<b>2 PB 15</b>	600	442	12	106	$1.08 \times 10^{-1}$	$7.96 \times 10^{-2}$	24	382	2000	7.5
<b>4 PB 15</b>	1200	885	24	212	$2.16 \times 10^{-1}$	$1.59 \times 10^{-1}$	48	382	2000	12

\* Voltage at 20 °C is 45 volts.

### Optical Speed Sensor

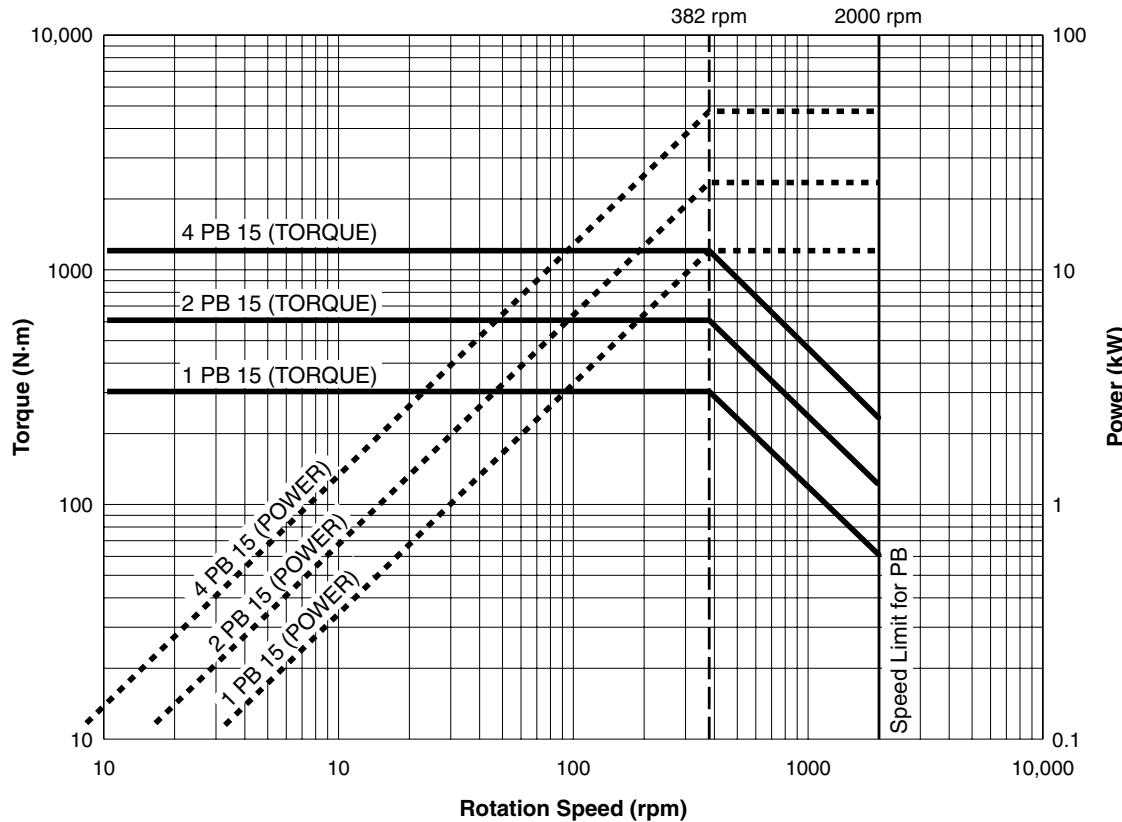

Each 15 Series PB Dynamometer has an optical speed sensor with a 60-bit pulse wheel delivered as standard. For better speed resolution in low speed applications, Magtrol offers a 600-bit or 6000-bit speed pickup (encoder) as an option.

### Cooling Water Consumption

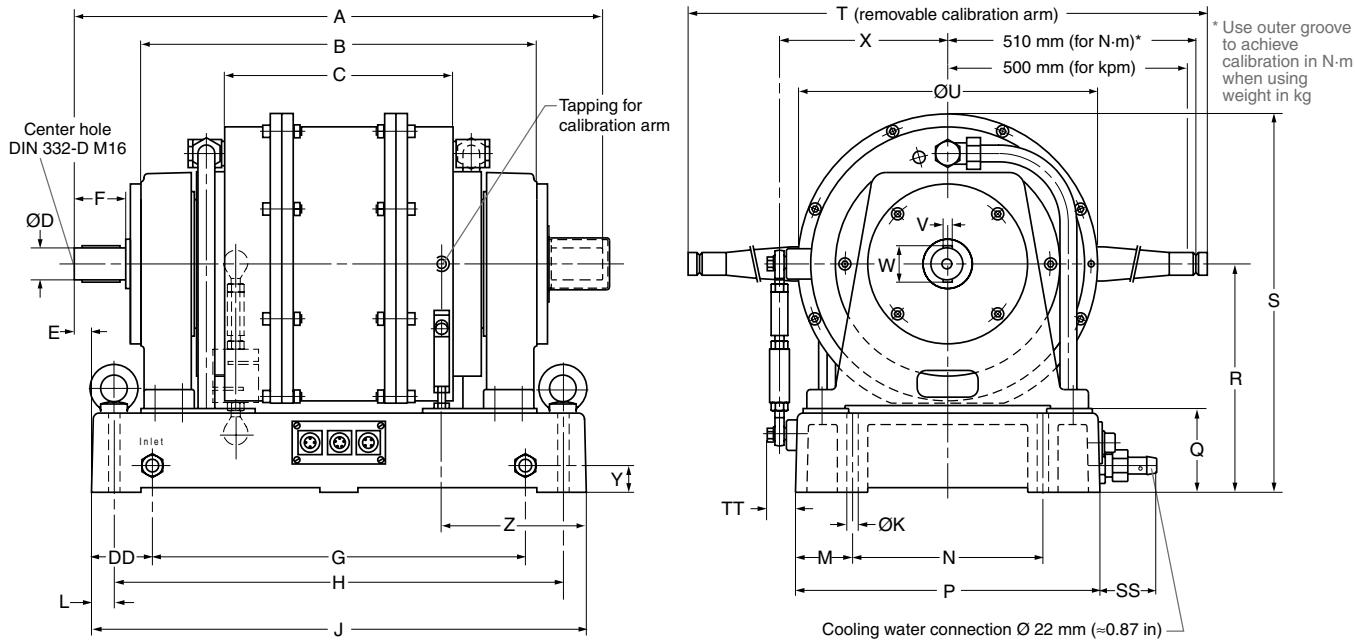

For all PB models:  $\approx 30 \text{ l/kWh}$  at  $\Delta t = 30^\circ\text{C}$  (Metric)  
 $\approx 8 \text{ gal/kWh}$  at  $\Delta t = 86^\circ\text{F}$  (US)

## PB TORQUE–SPEED–POWER CURVES

The diagram below shows the characteristic curves for the 15 Series Powder Dynamometers.

## SINGLE DYNAMOMETER DIMENSIONS

**NOTE:**

Original dimensions are in Metric units. Dimensions converted to English units have been rounded up to 2 decimal places.

## TANDEM OPERATING PRINCIPLES

Because the characteristics of the WB and PB dynamometers are complementary, Magtrol is able to offer them mounted in a tandem setup. Each dynamometer (WB and PB) can autonomously operate according to its own characteristics.

An electromagnetic clutch is needed for this application which automatically switches off at the maximum speed of the PB Powder Dynamometer and automatically switches on at zero speed.

## TANDEM DYNAMOMETER RATINGS

## DYNAMOMETER OPTIONS

### Industrial Version (IS)

Single WB and PB Dynamometers are also available in an industrial version which includes bearing supports, but does not provide a base plate, or torque and speed measurement.

### Vertical Mounting (V)

Vertical Mounting is available on the Eddy-Current (WB) Dynamometer only. The vertical version has an adapted bearing fitting and its maximum speed is limited.

### Speed Pickup (DG)

All models, including tandems, are equipped with a 60-bit optical speed sensor. On PB Dynamometers, a 600-bit or 6000-bit speed pickup (encoder) is available as an option for low speed applications.

### Mechanical Rotor Blocking Device (MB)

A mechanical rotor blocking device, which allows locked rotor testing, is available for the WB Dynamometer.

## DYNAMOMETER MODELS

Eddy-Current	Powder	Tandem
1 WB 15	1 PB 15	2 WB 15 + EK + 1 PB 15
2 WB 15	2 PB 15	2 WB 15 + EK + 2 PB 15
3 WB 15	4 PB 15	2 WB 15 + EK + 4 PB 15
4 WB 15		4 WB 15 + EK + 1 PB 15
		4 WB 15 + EK + 2 PB 15
		4 WB 15 + EK + 4 PB 15

## ORDERING INFORMATION

If one of the listed options is desired, please follow the dynamometer model (see table above) with a dash and then the appropriate suffix (as noted in parenthesis). For example, a Model 1 PB 15 Powder Dynamometer with an optional 6000-bit speed pickup is a 1 PB 15 - DG - 6000.

Example: 

## SYSTEM OPTIONS AND ACCESSORIES

	DESCRIPTION	MODEL / PART #
ELECTRONICS	High Speed Programmable Dynamometer Controller, 120 VAC	DSP6001
	High Speed Programmable Dynamometer Controller, 240 VAC	DSP6001A
	Torque-Speed Conditioner (includes necessary cables)	TSC 401/121
	Power Supply (includes necessary cables)	DES 311/121
	High Speed Single-Phase Power Analyzer	6510e
	High Speed Three-Phase Power Analyzer	6530
