Allows doors to be conveniently opened with a smartphone

Product description

With its smartphone-controlled door opening technology, FUHR is expanding its range of intelligent access control systems and offering a product suitable for integration in smart home applications. Integration is via radio signal, so it doesn't affect the look of the door, either. This latest in-house development from FUHR, based on highly-secure WLAN technology, is not just clever, but also blissfully simple.

Thanks to an intelligent app, the new system is exceptionally easy and intuitive to operate. If desired it can also be controlled over the internet. This means the user can monitor and control doors and block individual users and/or applications from wherever he or she is located. The system can additionally be used to operate e.g. garage doors, lights, or a radio gong.

The core component of **SmartConnect easy** is a WLAN plug that can be used to control a wide range of FUHR motorised locks via smartphone – with all the simplicity of wireless radio technology. The WLAN plug, which can be plugged into any 230-volt socket, communicates by radio signal with the customer's chosen motorised locking systems. This makes **SmartConnect easy** ideal for retrofit projects and for additional or follow-up business.

The large number of users for which it can be configured means it is predestined as an access control system for e.g. small businesses, doctors' surgeries, lawyers' offices, and apartment buildings. But detached and semi-detached homes are where its benefits shine through most of all. **SmartConnect easy** can be configured for up to 200 different users. Additional applications can be added very simply via its password-protected administration area. And as a further innovative security feature, individual time profiles can be set up for specific users and applications. **SmartConnect easy** also logs all changes, settings, and access operations.

Details

Further details including final product characteristics will be announced in due course.
