

DOPPLER
green energy

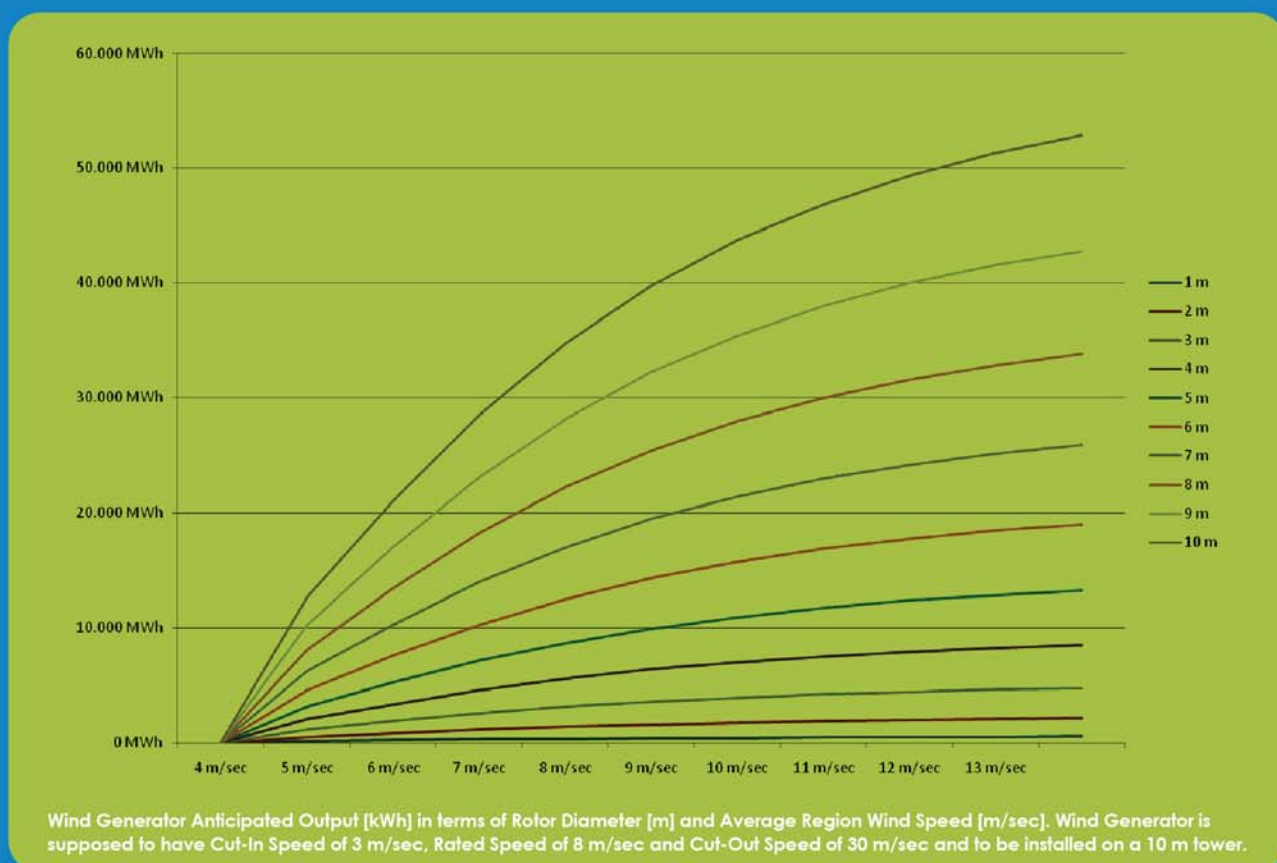

Take advantage of the wind energy!

Wind Power Generators

Why Wind Energy?

- Wind Energy is free. The main cost is the initial cost. Operating costs are minimal comparing to other energy production methods.
- Wind is also a continuing and abundant resource and will never run out from overuse.
- Wind turbines take minimal land space. The land around the tower can still be used and they can practically be placed anywhere.
- They constitute a solution for remote locations, where grid is unable or very expensive to reach.
- They promote national sustainable energy development and reduce dependency on energy import.
- They produce clean energy – no green house gases or other pollutants – so they help reduce a home's emissions profile. Clean electricity production is opposed to that generated by the burning of expensive fossil fuels that reduce air quality.
- All day long energy production, so this makes it ideal for stand-alone systems as they minimize the required accumulator capacity.
- Wind Generators come in a wide range of sizes, so this makes it easy to fit one for your special needs.
- Most countries worldwide promote Green Energy by adopting Feed In Tariffs (FIT) for energy produced by renewable energy sources. These FIT can yield a payback period of less than three years in some cases, whereas most of the times they ensure a 20 or 25 years contract with the electricity contractors.

Factory - Head Office

Polykastro Industrial Park | 61200 Polykastro | Kilkis
Tel: +30 23430 20140, 20150
Fax: +30 23430 23701
E-mail: info@doppler.gr

Athens Offices - Showroom

12, Lassani str. | 12132 Peristeri | Athens
Tel: +30 210 3416210, 210 5789881
Fax: +30 210 3416474
E-mail: infoath@doppler.gr

Warehouse

Aspropirgos | Attiki Odos Exit 4
Kyrillos | 19300 Athens
Tel: +30 210 5595163
Fax: +30 210 5596651
