Draw-wire encoder D125 | Base-Line | Measuring length max. 10 m

The draw wire system D125 is more than a sensor for determining length-related position data. Variants with integrated inclinometer and redundant interfaces offer versatile application possibilities. The contactless magnetic position scanning, a high IP67 protection level and the wider temperature range round off the product.

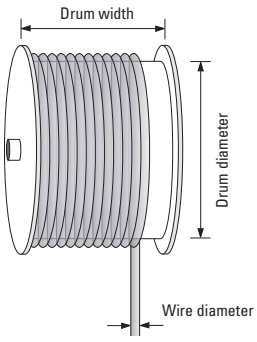
Operating principle

Construction
The core of a draw-wire device is a drum mounted on bearings, onto which a wire is wound.
Winding takes place via a spring-loaded device.

Note
Exceeding the maximum extension length of the draw-wire will lead to damage to the wire and the mechanics.



1) May be lower at low temperatures.
