

## General

Diaphragm metering pumps of the MEMDOS MR series have been developed for a broad range of applications in metering technology. Thus they are used in the industrial sector, in process engineering and very frequently in water and waste water treatment. Diaphragm metering pumps are leakproof.

Standard versions are metering pumps with the head located on the left-hand side.

Type MR...L (Symbol

Upon request, metering pumps with the head on the right-hand side can be supplied.

Type MR...R (Symbol

Duplex metering pumps are available with the head combinations shown in the following tables. The heads are arranged in diagonals.

Type ZMR.../... (Symbol

The power of the motor is the same for simplex and duplex metering pumps because the diaphragms operate in a push-pull arrangement.

## Metering Head

The heads are available in polypropylene and stainless steel. Special materials upon request.

Suction and discharge valves are double-ball valves up to the MR 290 version; for the bigger pumps, spring-loaded flat-seat valves are used. For viscous media of 400 mPas and more, spring-loaded single-ball valves are recommended for the suction and the discharge side. The opening pressure of the valve is about 0.1 bar.

## Separating chamber

The diaphragm flanges have been designed so that, in the case of a diaphragm rupture due to wear, no chemical can escape randomly from the pump or enter the gear. The leakage is routed downwards through a drain pipe. The diaphragm flanges thus function as a separating chamber and are protected against aggressive media by means of powdery epoxy coating. The escaping leakage can be detected by a leakage probe causing the pump to be stopped (see MB 1 31 01).

## Drive

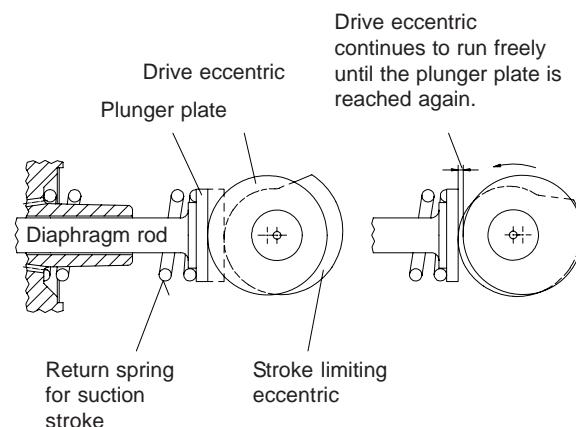

The drive unit consists of an oil-filled worm gear. The stroke is generated by an eccentric which moves back and forth a spring-loaded plunger fixed to the diaphragm. The metering stroke is achieved by the pushing force of the eccentric, the resetting of the spring causes the suction stroke. The stroke length is set by limiting the plunger return by means of a manually adjustable eccentric disk used as a stop.

The stroke length which determines the metering capacity can be adjusted manually during operation between 0 and 100 %.

The standard version is equipped with manual adjustment. Upon request, an automatic remote adjustment (ATE) can be supplied.

## Functional diagram

# Diaphragm metering pump MEMDOS MR

## MB 1 05 02 / 2

### Technical data

The capacity is valid at 50 Hz operation.

#### Simplex metering pumps

Memdos MR		400	600	980
max. pressure	bar	5	5	4
at max.	l/h	440	640	990
pressure	ml/stroke	165	165	165
strokes/min		47	70	101
diaphragm ø	mm	185	185	185
weight	kg plastic	38	38	38
	SS	48	48	48

#### Duplex metering pumps with equal heads

Memdos ZMR		50/50	75/75	115/115	140/140	210/210	290/290	400/400	600/600	980/980
max. pressure	bar	10	10	10	10	10	10	5	5	4
at max.	l/h	50/50	90/90	135/135	160/160	240/240	290/290	440/440	640/640	990/990
pressure	ml/stroke	20	20	20	37	37	48	165	165	165
strokes/min		47	70	101	70	101	101	47	70	101
diaphragm ø	mm	90	90	90	120	120	150	185	185	185
weight	kg plastic	38	38	38	38	38	40	50	50	50
	SS	48	48	48	48	48	53	60	60	60

#### Duplex metering pumps with different heads

Memdos ZMR		50/400	75/140	75/600	115/210	115/290	115/980	140/600	210/290	210/980	290/980

weight	kg plastic	49		38		49		38		41	
	SS	55		48		55		48		55	

Max. supply pressure ( $\Sigma$  static + dynamic): 500 mbar

#### Additional components

Upon request, the metering pump can be supplied with an inductive sensor for the eccentric shaft allowing to use the number of strokes for batch processes.

#### Accessories

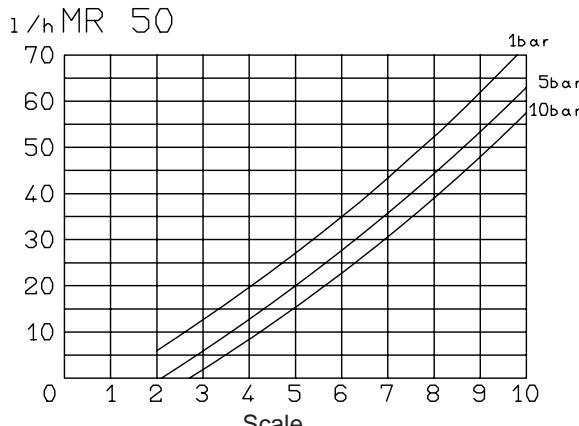

*Thyristor controller*  
for the control of a d.c. drive  
(see MB 4 20 01).

For further accessories see "Installation example".

*Frequency converter*  
for the control of 3-phase motors. In the case frequency converter operation, a 0.75 kW motor and an external vent must be used.

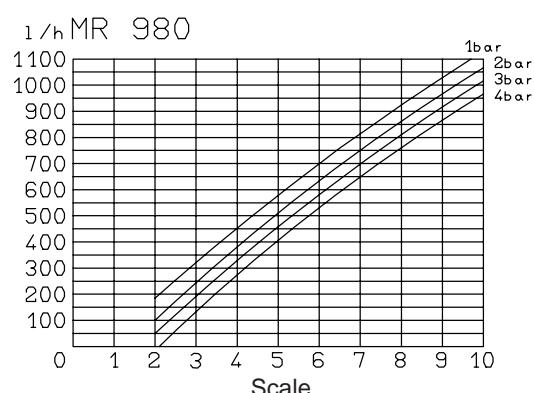

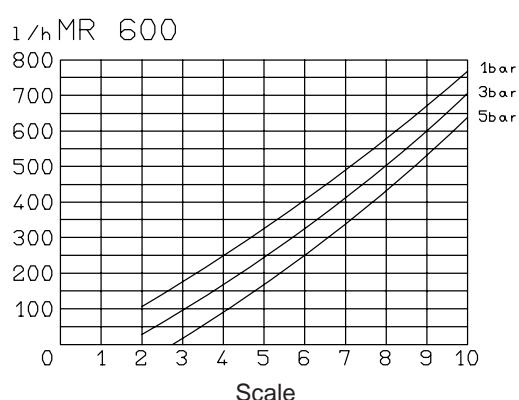

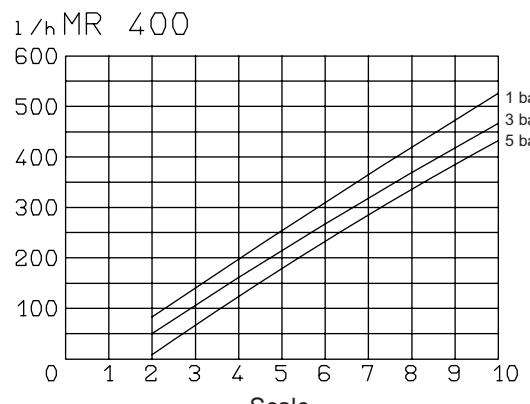

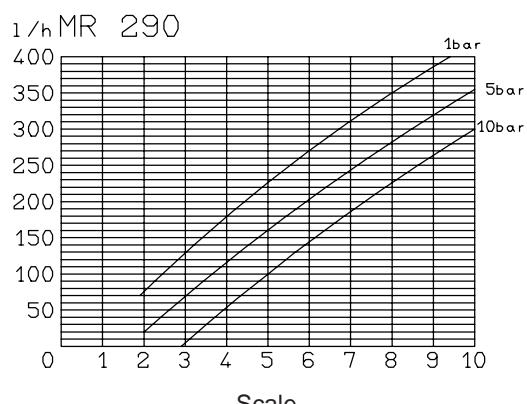

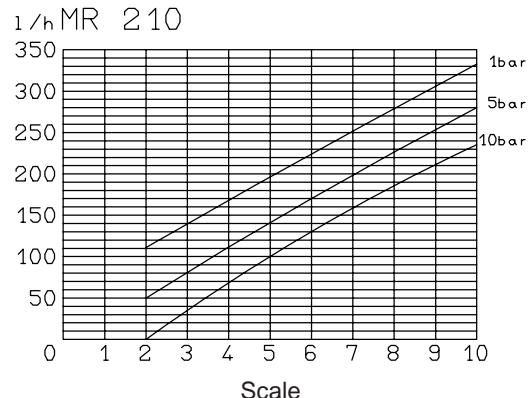

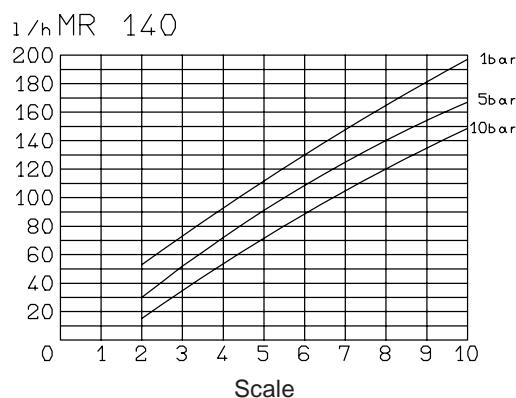

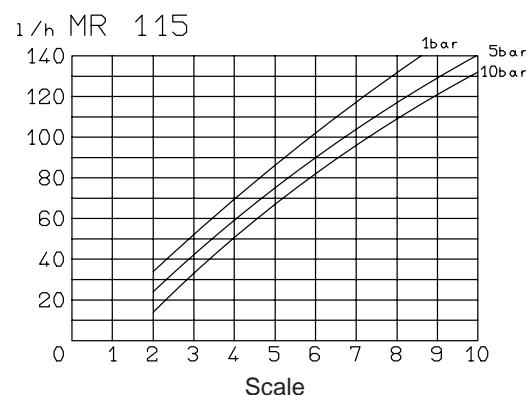

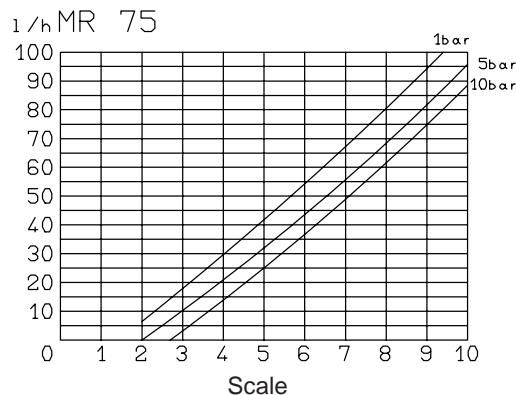

#### Performance curves

run with water, suction lift about 0.5 m

## Performance curves

run with water, suction lift approx. 0.5 m

## Selection tables

In order to offer the user a wide variety of pumps, the metering pumps have been divided into the most important functional groups. The pump can be made up according to the individual requirements.

Select the pump from the following modules:

- |          |        |          |             |          |      |
|----------|--------|----------|-------------|----------|------|
| <b>1</b> | Gear   | <b>2</b> | Motor       | <b>3</b> | Head |
| <b>4</b> | Valves | <b>5</b> | Connections |          |      |

The numbers on the pump drawing refer to the corresponding selection tables.

### Order example

For metering aluminum sulfate and sodium hypochlorite, metering pumps are required.

Given operating data:

380 l/h aluminum sulfate, max. pressure 4 bar

45 l/h sodium hypochlorite, max. pressure 3 bar

Mains voltage: 230/400 V, 50 Hz

In this example, both chemicals shall be metered at a fixed ratio. Therefore a manually adjustable duplex pump ZMR 400/50 should be ordered.

Resistant head material: PP

The suction and discharge valves are determined according to the resistance of the sealing materials. Hypalon is resistant to aluminum sulfate. Viton is resistant to sodium hypochlorite.
