## General

VAHLE compact conductor system type VKS10 are compact and shock hazard protected safety conductor rails. They consist of a flatformed insulated housing with integrated copper conductors. These conductors are protected according to European standard EN 60529. They comply with accident and VDE regulations in the context of electrical, mechanical and fire safety and are protected to IP 21 standards.

For the collectors is the contact protection only applies if the carbons are complete in the conductor. Conductor systems located within arm's reach, and in which the collectors leave the conductor rails during operation, must be provided with protection against

contact at the installation site, e.g., with the use of barriers or shutoff switches. This is only necessary for voltages above 25 Volts AC or 60 Volts DC.

The insulated housing accommodates up to 10 conductors. No special finishing work to the rail ends is necessary. The compact design allows direct mounting in runway beams and Vahle support profiles.

The conductor rail is designed for indoor use only and for hanging and lateral arrangement in straight or curve systems.

## Electrical values of the conductor system

Max. continuous current:	140 A <sup>(1)</sup>
Permitted operating voltage (UL):	690V (600V)

## Electrical values of the housing

Dielectric strength in accord. with DIN 53481:	> 25 kV/mm
Specific resistance in acc. with IEC 60093:	> $1 \times 10^{14} \Omega \times \text{cm}$
Surface resistivity IEC 60093:	> $1 \times 10^{13} \Omega$
Leakage resistance in acc. with IEC 60112:	CTI $\geq 400$
Combustibility:	flame retardant, self-extinguishing, UL 94 VO

## Chemical resistance of the insulated housing at +45°C ambient temperature:

Petrol, mineral oil, greases	resistant
Caustic soda up to 50 %	resistant
Hydrochloric acid, concentrated	resistant
Sulfuric acid up to 50 %	resistant
UV (Xenon test > 1500)	resistant

Please note: When using extra-low voltages please submit detailed information with your inquiry, especially with regard to the ambient conditions. In order to process quotations and orders, we require drawings if the conductor system includes curves or rail section isolation.

Please use our questionnaire on pages 26.

## VKS10 Compact conductor system

Application area: Indoor installation

### Sections

The insulated housing accommodates up to max. 10 conductors and provides reliable insulation. The standard length is 6 m, shorter lengths can be supplied. The ground conductor rail is identified with continuous yellow marking. The asymmetric design eliminates the possibility of reversing the phases during installation. One fixpoint hanger is required for each conductor section.

### Joints

The insulated housing sections are connected with joint caps, the conductors are joined with copper plug-in connectors.

### Feeds

Feed units can be supplied as end or line feeds with plastic terminal boxes or as especially flat line feeds for direct single core cable connection. Both line feed types are supplied preassembled on a 1 m conductor rail section.

The end feeds are supplied loose and can only be used in conjunction with the VLS line feed.

### Hangers

The maximum distance between suspension points must not exceed 1.2 m. The hangers are available for the following mounting options:

1. for assembly in VAHLE support profile (self-locking)
2. for assembly in c-rail (bolted type)
3. for assembly to plain surface (bolted type)

The conductor system can move with the sliding hangers for longitudinal expansion. At the fixpoint it is locked by an additional screw.

The distance between two fixpoints is max. 6 m.

### Isolating sections

Conductor dead sections are electrical interrupts of the conductor. Under normal operating conditions a cross over with collectors to switch the voltage off or on is only allowed with low power ratings (control current).

Conductor dead sections can be mounted at any position of the system. The plastic inserts are pushed into the copper profiles and ensure a smooth transfer of the collector brushes.

The length of the isolating section has to consider the total length of the carbon brush and whether the carbon brush must or must not bridge the isolation area.

Attention: Special attention is required for double collectors or collectors switched in parallel. Use double isolating sections where necessary.

### Current collectors

The current collectors are manufactured from impact resistant plastic and stainless steel parts. The current is transmitted by a carbon brush. According to the application, one or more current collectors are required per phase and ground conductor. The current collectors for the ground conductor can be identified by yellow color-coding and are equipped with different fixings to make them not-interchangeable with the phase current collectors. Springs in the current collectors ensure even pressure of the carbon brush against the conductor, thus maintaining reliable contact.

The current collectors must be mounted on base plates or rectangular brackets.

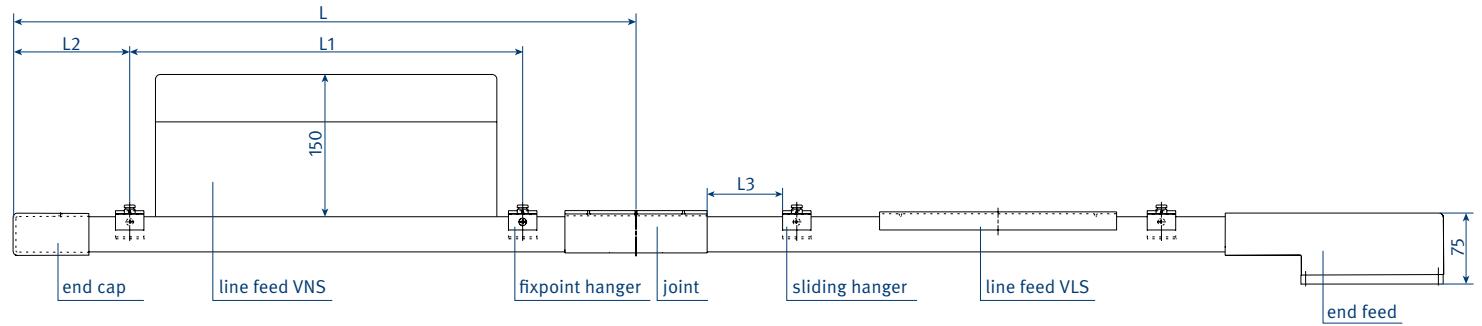

The length of the current collector cable should not exceed 3 m, if the connected overload protection is not according to the load of this connecting cable. See as well DIN VDE 0100, part 430 and DIN EN 60204-32. (Note: The a.m. often occurs in systems with more collectors per system.)

The connection cables provided are adequately sized for the specified nominal currents. Reduction factors in accordance with DIN VDE 0298-4 are to be taken into account for various layout methods.

### Layout plan

We create a custom layout plan for each delivery.

## System diagram

L = length of conductor section (standard length: 1m, 2m, 3m, 4m, 5m, 6m respectively short length)

L1 = support distance for straight runs: max. 1.2m in curves: max. 0.6m

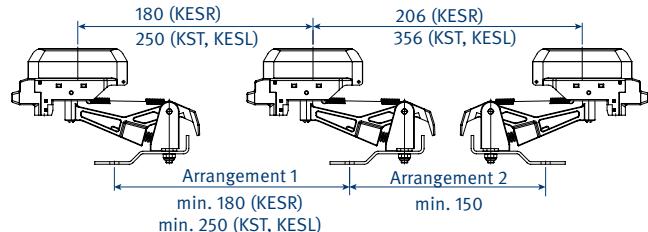

L2 = overhang (max. 350 mm)

L3 = distance, to be allowed for conductor system expansion (min. 50 mm)

## Max. hanger distance

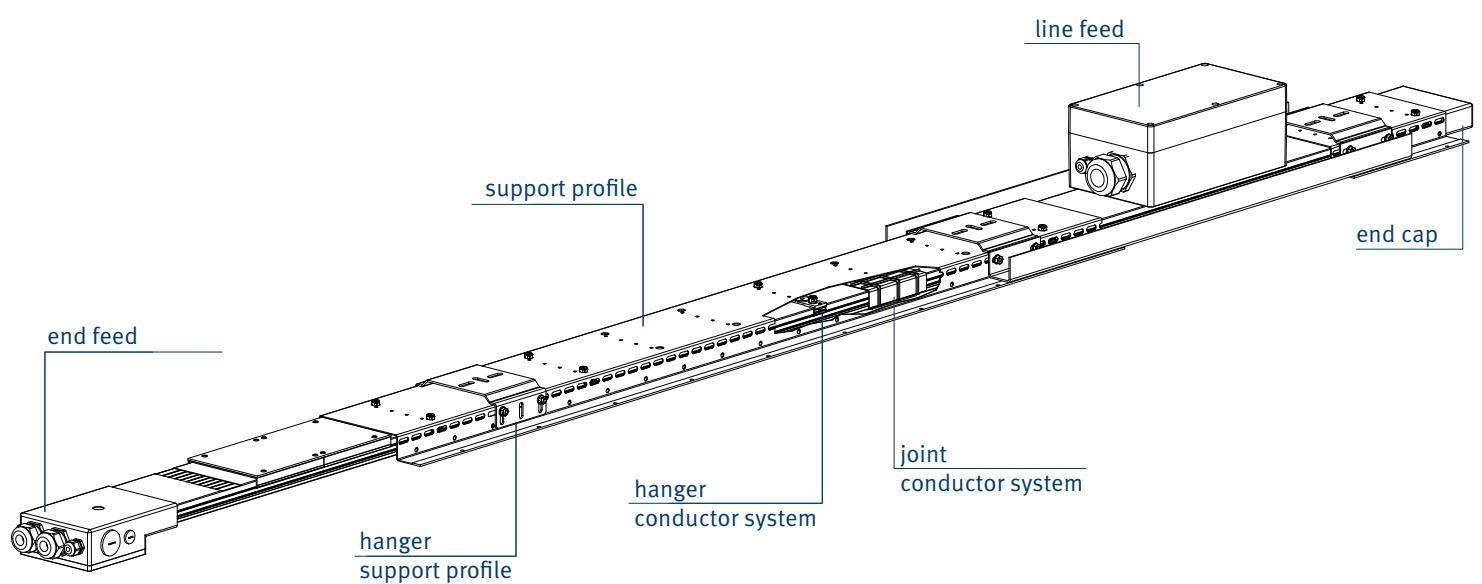

### Conductor system VKS10

• in straight runs	1,2 m
• in curves	0,6 m
• horizontal	0,6 m

### Support profile VTP10

• on rack uprights	4,5 m
• on support posts	4,0 m
• horizontal arrangement	3,0 m
• attached to the wall	3,0 m

(1) Bigger clamping range on request

(2) Locking torque of the round-head screw M 10, MA= 18 Nm

## Positioning systems

Cost-efficient installation of different positioning systems

### Earthing of the code rail:

Connect the WCS code rail at least every 30 m to the potential of the system of low resistance.

Type	Weight kg	Order-No.
PS-WCS3-EVTP10	0,026	302 160

### Fixing clip

for laminate band

Fixing distance 0.2 m

Type	Weight kg	Order-No.
PS-WCS3-BKK	0,002	780 193

### Position

encoding band

Type	Weight kg	Description	Order-No.
PS-WCS3-CS70-L2	0,040	Plastic laminate band with special perforation (WCS 3)	302 106
PS-WCS3-FPK	0,001	Screws for fixation	780 140
PS-BCB-50	0,015	Barcode band (BCB)	302 107

(1) Max.travel length 327 m

(2) Max.travel length 10.000 m

## Installation tools

### Joint cap assembly tool

For use with support profile

Type	Weight kg	Order-Nr.
MZ-MGVK	0,350	780 070

### Copper connector mounting lever

For use with support profile

Type	Weight kg	Order-Nr.
MZ-MGVS	1,50	780 090

### Installation comb

set for VKS10

To adjust the air gap at the joint

Type	Weight kg	Order-Nr.
MZ-MK	0,230	781 112
