

Air-operated diaphragm pumps

Type RFM and RFML

More than just pumps

FLUX air-operated diaphragm pumps Type RFM and RFML of solid construction

FLUX air-operated diaphragm pumps are most versatile and can be used for almost every liquid in all different fields of industry.

Be it viscous products, even with solids in suspension, abrasive fluids, high flammability or aerated liquids: FLUX air-operated diaphragm pumps meet every application featuring high operation safety and reliability.

Due to their solid construction together with matched diaphragms, these self-priming pumps are especially designed for continuous operation. FLUX air-operated diaphragm pumps ensure a very smooth liquid transfer (no shearing), are insensitive to solids in suspension, safe in dry running as well as totally overload-proof.

Other main features of FLUX air-operated diaphragm pumps are their high cost efficiency and a very low noise level. Each pump can be easily dismantled for an optimum cleaning. A comprehensive range of accessories such a pulsation dampers, pressure controllers with filter unit, stroke counters and fittings guarantee a safe use of the pumps.

Which material goes best with which liquid

Material: Pump housing

Polypropylene (PP) up to 60 °C
suitable for corrosive liquids, acids and alkalis
as well as neutral liquids

Polypropylene conductive (PP) up to 60 °C
suitable for high flammability liquids

Polytetrafluorethylene (PTFE) up to 100 °C
suitable for very corrosive liquids, concentrated acids
and alkalis as well as neutral liquids

Polytetrafluorethylene conductive (PTFE) up to 100 °C
suitable for high flammability liquids

Material: Diaphragm, Balls and Seals

NBR (NN) up to 90 °C
Acrylonitrile-Butadiene-Rubber

EPDM (EE) up to 80 °C
Ethylene-Propylene-Diene-Rubber

FKM (VV) up to 90 °C
Fluor-Rubber

PTFE/FFKM (TK) up to 100 °C
Polytetrafluorethylene/Per-Fluor-Rubber

PTFE/EPDM (TE) up to 80 °C
Polytetrafluorethylene/Ethylene-Propylene-Diene-Rubber

PTFE/FKM (TV) up to 90 °C
Polytetrafluorethylene/Fluor-Rubber

Example of type code

RFM 25 PP/TV

RFM 25 PP/TV = model size

RFM 25 PP/TV = material pump housing

RFM 25 PP/TV = material diaphragm and balls

RFM 25 PP/TV = material seals

Air-operated diaphragm pumps size 3/8" Type RFM 10 / Type RFML 10 electrically conductive	4 – 5
Air-operated diaphragm pumps size 1/2" Type RFM 15 / Type RFML 15 electrically conductive	6 – 7
Air-operated diaphragm pumps size 1" Type RFM 25 / Type RFML 25 electrically conductive	8 – 9
Air-operated diaphragm pumps size 1 1/2" Type RFM 40	10 – 11
Accessories and fittings	12 – 13
Function and construction features	14

Features and benefits:

- solid pump design due to massive type of construction
- four model sizes 10, 15, 25 und 40
- max. delivery rates of 1 to 375 l/min
- pump housing in PP or PTFE
- models 10, 15 and 25 also available in conductive version Type RFML for use in hazardous areas
- also available as FDA compliant Version
- vulcanized diaphragms including a metallic core
- safe dry running and overload-proof
- self-priming
- insensitive to solids in suspension
- variable delivery rates by simply adjusting the air pressure
- very high chemical resistance
- suitable for high temperature
- high service life due to short stroke lifts
- easily accessible control valve without seals

FLUX air-operated diaphragm pump Type RFM 10 in Polypropylene (PP) or Polytetrafluorethylene (PTFE), 3/8"

Technical Data

Delivery rate max.	30 l/min
Operating pressure max.	7 bar
Suction head, dry	up to 2-3 m
Suction head, liquid-filled	up to 8 m
Max. size of solids	2 mm
Connection pump	
Suction side	G 3/8 (BSP 3/8" female)
Discharge side	G 3/8 (BSP 3/8" female)
Connection air	
Inlet**	G 1/8 (BSP 1/8" female)
Outlet*	G 1/8 (BSP 1/8" female)

*with silencer

** with threaded union DN 8

Function and Construction Features

Function features in detail

FLUX air-operated diaphragm pumps are positive displacement pumps consisting of two pump housings and one control valve part. Diaphragms within the pump housings securely separate the liquid section (red) from the air section (blue). Both diaphragms are connected by a selector shaft which is located in the control valve part.

Compressed air inflating alternately the air sections causes a movement of the diaphragms (1st and 2nd cycle). The subsequent transfer operation is controlled by a control valve which is easy to dismantle. Due to their solid construction, the pumps are designed for continuous operation and do not require any special maintenance.

Construction features in detail

More than just pumps

Today the FLUX name is recognised around the globe as the trademark for top standards in pump technology. Everything started with the invention of the electric drum pump in 1950. Nowadays FLUX has an extensive range of products each of which can be customized. FLUX pumps are used for example in the chemical and pharmaceutical industries; in machinery and plant engineering as well as companies in electroplating, effluent treatment and the foodstuffs sector.

Whether single-product or system solution – FLUX quality is synonymous with a long service life, excellent economy and maximum safety.

In addition to the excellent product quality FLUX customers appreciate the superb level of expertise our staff has to offer as well as their genuine customer focus.

These days FLUX-GERÄTE GMBH supplies pumps to almost 100 countries around the globe.
